*The percent susceptible for each organism/antimicrobial combination was generated using the first isolate of that organism encountered on a given patient.

Organisms with < 15 isolates do not have sensitivities reported due to lack of scientific validity.

†Calculated from fewer than the standard recommendation of 30 isolates; number in parentheses is number of isolates tested

§Data from urinary isolates only

Abbreviations: CF - cystic fibrosis; R - intrinsic resistance; [-] Drug not tested or not indicated

** Selective isolates (ex. Multi-drug resistant organisms) were tested but did not achieve threshold for reporting
