

ED Post-Tonsillectomy Bleed Algorithm: Tranexamic Acid (TXA) Administration

Bleeding Severity

- **Mild:** < 2 tbsp or ooze
- **Moderate:** 2 tbsp - 1 cup and non-pulsatile
- **Severe:** > 1 cup or pulsatile

Inclusion

- ALL Post-tonsillectomy patients presenting with mild to moderate active bleeding or clot in tonsillar fossa

Exclusion

- Patients with severe bleeding
- Patients who are unable to protect their airway
- Patients unable to comply with nebulized medication administration

Aim

- To develop and implement a protocol and administer TXA to 75% of patients presenting with bleeding to the ED 6 months after implementation
- Initial dose of nebulized TXA given within 30 min of rooming patient
