
Molecular Tumor Board Recommendation
February 5, 2025

Dear Dr. Arnold:

The Markey Cancer Center Molecular Tumor Board met on February 4, 2025 and reviewed your patient, Boyd Rowe (007087315; adenocarcinoma of the bronchus). After reviewing the genomic report (Guardant360 CDx report dated January 18, 2025) and clinical characteristics of the case, the MTB recommends consideration of the following:

1. Consider the following clinical trial targeting the EML4-ALK fusion:
 - a. NCT05384626: A Phase 1/2 Study of the Selective Anaplastic Lymphoma Kinase (ALK) Inhibitor NVL-655 in Patients With Advanced NSCLC and Other Solid Tumors (ALKOVE-1)
2. Consider standard of care therapy.

Thank-you for submitting this case to the Markey Cancer Center MTB.
