

Molecular Tumor Board Recommendation December 18, 2024

Dear Dr. Fredericks:

The Markey Cancer Center Molecular Tumor Board met on December 17, 2024 and reviewed your patient, Elizabeth Martin (110704351; serous carcinoma of the endometrium). After reviewing the genomic report (Caris report dated December 5, 2024) and clinical characteristics of the case, the MTB recommends consideration of the following:

1. If progression, consider off-label hormonal therapy targeting the ER positivity of 70% and the PR positivity of 90%. This is a category 1 evidence level recommendation.
2. If progression beyond standard of care therapy, consider off-label lunresertib + camonsertib targeting the PPP2R1A mutation (P179R). This is a category 2 evidence level recommendation. Please note, this drug is not yet FDA approved and would need to be given through a compassionate use program. However, the drug combination is currently under review by the FDA; therefore, it may be approved and available by the time the patient progresses.
3. If progression beyond standard of care therapy, consider off-label erdafitinib targeting the FGFR2 mutation (S252W). This is a category 2 evidence level recommendation. Please note, in the single arm, phase 2 RAGNAR study, 217 patients with solid tumors (with FGFR alterations) were treated with erdafitinib, which produced an ORR of 30% and a disease control rate of 74%. In the endometrial cancer patients (n=8) the ORR was 50% and DCR was 75%. In the ovarian cancer patients (n=8) the ORR was 25% and DCR was 63% (PMID: 37541273). Of note, there were no patients with this specific FGFR2 mutation included in the study.

Erdafitinib in patients with advanced solid tumours with FGFR alterations (RAGNAR): an international, single-arm, phase 2 study. *Lancet Oncol.* 2023 Aug;24(8):925-935. doi: 10.1016/S1470-2045(23)00275-9. PMID: 37541273; PMCID: PMC11224843.
4. If concern for recurrence on PET and the area is available to biopsy, consider re-biopsy and sending for repeat NGS.
5. Please note, germline testing has been completed, and the patient has a known SDHA germline mutation.

Thank-you for submitting this case to the Markey Cancer Center MTB.

Level of Evidence	Interpretation	Supporting Evidence
1	FDA-labeled indication or NCCN-recommended; substantial evidence supporting use (standard of care)	Meta-analysis, RCTs, etc. OncoKB level 1
2	Off-label use; substantial evidence supporting use	Phase II studies and above OncoKB level 2 and above
3	Off-label use; low to moderate evidence supporting use; MTB recommends, clinical trial preferred	Phase I, case studies and reports OncoKB level 3 and below
4	Off-label; no evidence supporting use; enrollment in clinical trial recommended; report experience to MTB if used outside clinical trial	Little to no evidence (pre-clinical, animal/cellular models), mechanistically plausible
