

Molecular Tumor Board Recommendation May 23, 2025

Dear Dr. Sekkath-Veedu:

The Markey Cancer Center Molecular Tumor Board met on May 20, 2025 and reviewed your patient, Gary Carrigan (001256478; metastatic non-small cell carcinoma of the lung). After reviewing the genomic report (Caris report dated April 27, 2025) and clinical characteristics of the case, the MTB recommends consideration of the following:

1. If progression, consider on-label adagrasib or sotorasib targeting the KRAS mutation (G12C). This is a category 1 evidence level recommendation. Please note, the MTB recommends targeting the KRAS mutation first over targeting the MET overexpression.
2. If progression, consider on-label telisotuzumab vedotin due to the MET positive, 3+, 100% result. This is a category 1 evidence level recommendation.

Thank-you for submitting this case to the Markey Cancer Center MTB.

Level of Evidence	Interpretation	Supporting Evidence
1	FDA-labeled indication or NCCN-recommended; substantial evidence supporting use (standard of care)	Meta-analysis, RCTs, etc. OncoKB level 1
2	Off-label use; substantial evidence supporting use	Phase II studies and above OncoKB level 2 and above
3	Off-label use; low to moderate evidence supporting use; MTB recommends, clinical trial preferred	Phase I, case studies and reports OncoKB level 3 and below
4	Off-label; no evidence supporting use; enrollment in clinical trial recommended; report experience to MTB if used outside clinical trial	Little to no evidence (pre-clinical, animal/cellular models), mechanistically plausible
