

Molecular Tumor Board Recommendation

January 22, 2025

Dear Dr. Miller:

The Markey Cancer Center Molecular Tumor Board met on January 21, 2025 and reviewed your patient, Kenneth Mix (110714645; mixed adenocarcinoma and neuroendocrine neoplasm of the upper lobe of the lung). After reviewing the genomic report (Caris report dated December 11, 2024) and clinical characteristics of the case, the MTB recommends consideration of the following:

1. If progression, consider on-label adagrasib or sotorasib targeting the KRAS mutation (G12C). This is a category 1 evidence level recommendation.
2. If progression after targeting the KRAS mutation, consider on-label immunotherapy targeting the PD-L1 positivity of 5%. This is a category 1 evidence level recommendation.
3. If patient progresses after KRAS-targeted therapy, consider screening for the following clinical trial targeting the KRAS mutation (G12C):
 - a. NCT05585320: A Phase 1/2a Study of IMM-1-104 in Participants With Previously Treated, RAS-Mutant, Advanced or Metastatic Solid Tumors
4. If progression beyond standard of care therapy, consider the following clinical trial targeting the ARID1A mutation (Y1260fs):
 - a. NCT04983745: Niraparib and Dostarlimab in HRD Solid Tumors
5. If progression beyond standard of care therapy, consider the following clinical trial targeting the STK11 mutation (P179L):
 - a. NCT05887492: Study of TNG260 and an Anti-PD Antibody in STK11 Mutated Solid Tumors

Thank-you for submitting this case to the Markey Cancer Center MTB.

Level of Evidence	Interpretation	Supporting Evidence
1	FDA-labeled indication or NCCN-recommended; substantial evidence supporting use (standard of care)	Meta-analysis, RCTs, etc. OncoKB level 1
2	Off-label use; substantial evidence supporting use	Phase II studies and above OncoKB level 2 and above
3	Off-label use; low to moderate evidence supporting use; MTB recommends, clinical trial preferred	Phase I, case studies and reports OncoKB level 3 and below
4	Off-label; no evidence supporting use; enrollment in clinical trial recommended; report experience to MTB if used outside clinical trial	Little to no evidence (pre-clinical, animal/cellular models), mechanistically plausible
